

An Innovative Solution for Building Envelopes.

Lightweight architectural precast concrete and steel-stud cladding panels create the perfect combination for medical facility construction. Using proven technologies, Slenderwall pioneered the process of melding the durability and versatility of precast architectural concrete with steel-stud framing. The end result is a product that reduces the weight of the architectural precast by 66%. With over 2,000,000 square feet installed across North America, Slenderwall has proven its effectiveness. It's an efficient alternative to traditional architectural precast, masonry, glass and metal, while still maintaining the durability, quality and strength advantages over EIFS and other lightweight materials.

The cure for a tight budget and schedule.

Torre Ave Medical Tower, Mexico

At an average of 30lbs. per square foot, Slenderwall reduces the structural and foundation requirements of your project. Lighter weight also means larger panels, creating faster installation schedules. With the galvanized steel-stud framing already installed, fewer trades are needed on the job site. To create even more savings, you have the option of pre-installing the windows in the manufacturing process. This ensures a window installation under optimal conditions, with rigorous quality controls. As an added bonus, the unique outboard-of-floor-edge mounting creates additional usable square footage on every floor.

Wayne Hamburg Medical Offices, New Jersey

A true LEED performance.

Slenderwall is incorporated in multiple Gold and Silver LEED projects, contributing in the areas of: energy and acoustical performance; recycled and local materials; durability, mold prevention; resource efficiency, CO2 reductions; and job-site waste. Another major benefit is the built-in thermal break and the availability of factory-installed closed-cell foam insulation applied in levels up to R-42.

Marymount Medical Center, Ohio

No moisture.

If you deploy our patented H2Out™ Advanced Caulking and Leak Detection System, Slenderwall guarantees the integrity of your building envelope against moisture intrusion.

With Slenderwall the design possibilities and cost-savings are only limited by your imagination.
